**Journey to lush, wild Costa Rica** and experience natural wonders while you explore the role of sustainability in the coexistence of agriculture and native ecosystems. During this three-week field course, you will study diverse crops grown in varied environments — like tropical forests and terraced volcanic peaks — that accommodate everything from high-tech agriculture to traditional home gardens. You will assess the sustainability of these agricultural operations to gain an appreciation for the country’s diverse agricultural products, and you’ll see the effects of climate, geography and cultural practices on ecology and agriculture.

You’ll interact with local producers on an array of agricultural operations to learn about the challenges they face, the impacts of the practices and systems they use on their farms and the role of sustainability in their lives. You’ll encounter cultivated coffee, pineapple and banana crops in farming operations ranging from plantations to backyard gardens.

Through site visits, hands-on activities and research projects, you’ll learn key concepts of sustainable agriculture — i.e., environmental stewardship and social justice — ultimately enabling you to develop a personal understanding of sustainability. There will also be extracurricular excursions, including zip line tours and whitewater rafting.

### Sustainability of Tropical Agroecosystems

CRSS (HORT) (ANTH) (ECOL) (GEOG)

4931/6931 (3 hours)

**Projected travel dates:**
June

**Estimated cost:**
$2900 + UGA in-state tuition and fees + international airfare

**University of Georgia academic credit:**
3 hours

**Application deadline:**
Oct. 13
